Faculty of Law

The Chuo Law Faculty dates back 133 years to the origins of Chuo University as the Igrisu Horitsu Gakko (English Law School), and over the years has produced many talented graduates who have served in the fields of law, government, politics, and business. While maintaining its longstanding traditions, the Law Faculty remains committed to responding to the needs of students in our ever-changing society. Now the Faculty offers students courses in three Departments – Law, Political Science, and International Law and Business – all three of which reorganized their courses

and aspects of their curricula in 2014-2015 to help students be better prepared for an ever-changing job market. The Faculty of Law offers over 250 seminars, as well as many classes taught by prominent real-world professionals working in various fields. The curriculum helps students cultivate the abilities they need to progress to the Graduate School of Law, or to numerous other legal and non-legal career paths. The Faculty also offers special scholarships to encourage students' motivation.

Faculty of Economics

The Faculty of Economics fosters well-rounded cultural understanding and outstanding communicative skills, aiming to cultivate individuals with the breadth and depth of knowledge required to succeed in our rapidly changing world. Extensive seminar instruction is offered with introductory seminars from the first year and specialized seminars from the second through fourth years. In addition, a course clustering system enables students to study systematically in specialized fields. There is also a broad range of career-oriented subjects, including Career Design in the first year and internships

both in Japan and overseas during the second and the third. Among the specialized practical seminar courses offered from the second year is Global Field Studies, on-site fieldwork held overseas, which qualifies for academic credit. From 2014 we have developed this course to create the comprehensive Global Leaders Program. This program aims to foster the next generation of global leaders by boosting their ability to manage organizations in English, and provides keys to success in prominent positions on the world stage.

Faculty of Commerce

The Faculty of Commerce provides practical education in various areas of corporate activity and is divided into departments that provide specialized courses in four basic areas: business administration and information, accounting, distribution, and finance. In 2015 a new set of standard courses were introduced to develop a more fulfilling educational environment in which students can acquire basic knowledge of commerce, regardless of which department they are enrolled in. So that students can also develop a global mindset, those hoping to work overseas are given a wide range of global education opportunities. Furthermore, in order to enhance

career education, the Faculty offers the "Business Challenge Seminar and Internship: Soccer Management" program, as well as courses that collaborate with companies and organizations to offer real-world experience in all fields of business. The Faculty also produces a large number of successful CPA Exam candidates every year and boasts one of Japan's highest percentages of students who pass the CPA exam prior to graduation. Those who pass the exam go on to obtain desirable positions at major auditing firms and in corporate accounting departments across Japan.

Faculty of Science and Engineering

Located in central Tokyo, the campus of the Faculty of Science and Engineering sits on high ground in the middle of leafy surroundings in Bunkyo Ward. Equipped with state-of-the-art educational and research facilities, the Faculty, together with the Graduate School of Science and Engineering and the Institute of Science and Engineering, is proud of its comprehensive education and research capabilities. The Faculty emphasizes research-based studies in over 110 advanced laboratories, and in 2013 it established the Department of Integrated Science and Engineering for Sustainable Society. The departments cover a broad range of

science and engineering fields with highly advanced research, leading students to make over 300 presentations at academic conferences every year. The Faculty has consistently placed a high priority on fostering basic and universally applicable academic abilities and on cultivating independent and self-reliant individuals that can respond flexibly in the rapidly developing world of science and technology. This contributes to a high job placement rate, with over 3,000 job offers extended to students each year. At the same time, 40% of Science and Engineering Faculty students go on to graduate school.

Faculty of Letters

Humans and humanity are at the core of studies in the Faculty of Letters. 13 departments, including history, psychology, sociology, foreign language studies, and other fields essential to understanding human intellectual heritage, cultivate students with the ability to think deeply and gain a thorough understanding of diverse subjects. Priority is placed on small class size throughout the Faculty. Furthermore, academic staff are on call for students to consult at major-specific libraries, and educational programs are calibrated to meet diverse academic needs. Students can choose their own combination of courses from among more than 600,

including those from departments besides their own. The broad-ranging and flexible curriculum includes introductory subjects for first year students, Special Lectures dealing with interdisciplinary issues, Career Design subjects that help students plan their futures effectively, Academic Foreign Language and Skill-Building Foreign Language lectures conducted in the target languages, and a Global Studies program incorporating fieldwork and overseas training. The result is graduates who are talented, intellectually balanced, and independent-minded members of society.

Faculty of Policy Studies

The Faculty of Policy Studies equips students with the skills necessary for discovering and solving domestic and international concerns, as well as clarifying social phenomena based on a philosophy of integrating policy and culture. With four fields of focus – policy, culture, foreign languages, and information – the faculty offers students first a firm foundation in the liberal arts and then curriculum that enables them to study extensively in fields of their own particular interest. As for foreign languages education, in addition to English, courses are offered in 9 other languages (including Malay/Indonesian, Hindi/Urdu, and Persian), all taught in small-sized classes. The Faculty also supports students' overseas

activities, such as Field Studies. Furthermore, tailor-made courses give students the support and information needed to pass the IT Passport Examination, a Japanese national exam for proficiency in information technology skills. The Faculty of Policy Studies is committed to supporting students pursue independent study and develop presentation skills, as well as to foster the expansion of Project Based Learning. One example is the Faculty's Project Scholarships awarded to students that submit exceptional written proposals. Moreover, from their first year, students can participate in planning and staging the annual Research Festa, which is carried out by students and gives them a chance to share their research.

Faculty of Global Management

(opens April 2019)

With courses in international management, corporate economics theory, and other related areas, the new Faculty of Global Management will equip students with expertise in corporate management and global economy. It will foster active global business leaders with high communication skills through international area studies and foreign language education. The curriculum is characterized by a learning structure aimed at developing global awareness and the systematic acquisition of expertise on management and economics. Furthermore, the Faculty provides an English-based degree program and, with the option of Fall semester enrollment, will actively accept a significant number of international students. Such an academic environment will doubtless make a significant contribution to the furtherance of mutual exchange among students of diverse backgrounds. In this way, the Faculty aims to build meaningful reciprocal relationships in global business situations, encourage mutual economic growth and social development, and produce individuals with the power to realize a global inclusive society.

Faculty of Global Informatics

(opens April 2019)
