Faculty of Law

The Chuo Law Faculty dates back 136 years to the origins of Chuo University as the Igrisu Horitsu Gakko (English Law School), and over the years has produced many talented graduates who have served in the fields of law, government, politics and business. While maintaining its longstanding traditions, the Law Faculty remains committed to the needs of university education and to

servicing our ever-changing society. The Faculty of Law offers more than 280 seminars, as well as numerous classes taught by prominent real-world professionals working in various fields. In addition, the curriculum guides students to cultivate the abilities they will need to enter the Graduate School of Law and numerous other legal and non-legal career paths.

Faculty of Economics

The Faculty of Economics emphasizes practical education to develop the basic skills and specialized knowledge needed to become a working member of society. Specifically, the systematic curriculum aims to foster skills that students will need in our global society, based on three pillars: seminars, career education, and global human resource development. For human

resource development, the Global Leaders Program nurtures individuals who can succeed on the world stage. Collaborating with alumni Hakumon-kai branches worldwide, the Faculty also provides overseas internships. Economics graduates enter a wide variety of industries in the professional world and, remarkably, about ten percent become civil servants.

Faculty of Commerce

In 2019, the Faculty of Commerce established internships in sports businesses and overseas companies, and many Project-Based Learning classes that enable students to undertake the development of products and services aimed at community problem solving. In addition, the Department of Marketing and International Trade will be established in 2022. In global society, with the growth of diverse consumer values, the globalization of businesses, and the importance of trade, students can

learn theory and practice in marketing and trade from an international perspective. The Faculty also helps students learn practical skills linked to career qualifications, such as CPA, Financial Planner, and Securities Analyst, and produces numerous successful CPA Exam candidates each year, boasting one of Japan's highest pass rates. In 2020, 45 students (including graduates) passed the exam and went on to obtain positions at major auditing firms and corporate accounting departments across Japan.

Faculty of Science and Engineering

The Faculty of Science and Engineering emphasizes fostering individuals with solid basic knowledge and applicable skills in the specialized fields of each department, and equips students with the abilities for diversified needs, including negotiation to integrate organizations and competence to deal with the challenges

presented in new issues, as well as the ability to play an active role in global society. In addition, the Department of Data Science for Business Innovation was established in 2021 to foster students who can acquire and practice the skills required for data scientists, such as mathematics, programming, and knowledge for business and industry.

Faculty of Letters

Humans and humanity are at the core of studies in the Faculty of Letters. The Faculty aims to cultivate students with specialized knowledge and broad learning in liberal arts, as well as the ability to think deeply and gain a thorough understanding of diverse subjects. In 2021, the Department of Interdisciplinary Studies was

established to cultivate students' own interests from two perspectives: "Social Cultures" and "Sports Cultures." This Department offers the advantages of learning in a wide range of fields within 13 departments, such as literature, culture, foreign language studies, history, philosophy, sociology, pedagogy, and psychology.

Faculties

Faculty of Policy Studies

With four fields of focus – policy, culture, foreign languages, and information, students are first given a firm foundation in liberal arts, preparing each individual to study extensively in fields of their own interest. In addition to English classes, nine other languages (including Malay/Indonesian, Hindi/Urdu, and Persian) are taught in small classes. The GATE Program is conducted in English and other

languages, offering learning in specialized fields, and information education supports students to pass the national IT Passport Examination. With distinctive curricula and appealing seminars in various fields, the Faculty also supports students' off-campus activities, helping individuals to discover and solve problems, and to analyze social phenomena in Japan and overseas from various perspectives.

Faculty of Global Management

Global Management offers opportunities to acquire the knowledge and practice necessary for a global business leader to be able to play an active role in international business. The areas of study are related to business strategy, corporate management, such as marketing, finance, human resources, and institutions, and global economies, such as international economy, industrial economy, and public economy. In addition, students can study a wide range of fields, such as international area studies for cross-cultural understanding, information statistics that accurately collect and analyze information in the time of big data, and business communication skills and negotiation

theory to improve foreign language proficiencies. The curriculum is characterized by a learning structure aimed at developing global awareness and the systematic acquisition of expertise on management and economics. Seventy percent of classes are taught in foreign languages (mainly English) in order to accept many international students and promote internationalization. The Faculty also aims to build meaningful reciprocal relationships with actors in the global business community in order to encourage mutual economic growth and social development and to produce individuals with the power and capabilities to realize a globally inclusive society.

Faculty of Global Informatics

Information Systems, Information with Law, and Global Liberal Arts are the focuses of learning in the Faculty of Global Informatics. In the rapidly changing world of information technology, laws and regulations have not caught up with developments in information communication technology. In order to solve problems in such a society, we need to have knowledge of information systems (information technology) and knowledge of laws and regulations in the information field. Focusing on the integration of Information Systems and Information with

Law, the Faculty offers specialized education necessary for tomorrow's information society. Furthermore, in order to play an active role in global society, students are required to have knowledge and skills obtained through specialized education, English ability, and cross-cultural understanding to collaborate with others based on global liberal arts, such as philosophy, ethics and religion. In short, the Faculty regards Information systems, information with law, and global liberal arts as pillars of learning.

Distance Learning Division, Faculty of Law

The Distance Learning Division of the Faculty of Law, in order to foster individuals with global legal minds, aims to cultivate basic legal expertise and contemporary liberal arts competence as necessary qualities and abilities. The Faculty promotes digitalization and conducts on-

demand-schooling to maintain the quality of education. Students can study all courses without coming to campus. Eighty percent of enrolled students are also working professionals and graduates playing active and competent roles in society.
